TANlock<sup>®</sup> 1  
Secure protection of the  
critical infrastructure.

WWW.TANLOCK.COM

THE SIMPLE WAY TO SECURE YOUR RACKS.

## high versatility

The TANlock 1 has many different solutions for various sectors, besides data centers to protect sensitive data and ensure security in the digital age.

### Safe

TANlock 1 secures your infrastructure with an exchangeable DIN 10/30 half-cylinder, which offers safe (un-)locking features. Remote (un-)locking is also possible. An LED (red/green/blue) at the front of the handle always signals the locking status.

### Compatible

TANlock 1 does not require server cabinets from specific manufacturers. With the option of left or right door opening, rod latch and cam opening, it is compatible with most server cabinets and much more!

With an IP65 protection, TANlock 1 is equipped for any weather. This means, it is also compatible for outdoor use.

### Easy integration

Through a standard interface and 3.8V-32V power supply, TANlock 1 can be integrated (almost) everywhere and offers the easiest integration possible.
